Hypothesis Testing Summary — Findings & Recommendations

Section A: Rating Distribution by Restaurant Parameters

#	Hypothesis	Status	Finding	Recommendation
1	Full bar access has a positive association with top Overall Rating	Accepted	Full Bar: 46% Rating-2 (tied-highest with Wine & Beer 46%; None: 40%)	Prioritize full bar or wine & beer service over no-alcohol venues
2	Smoking allowed within a restricted area has a positive association with top Overall Rating	Accepted	Bar Only (58%) and Smoking Section (46%) both clearly beat blanket No-Smoking (40%) and blanket Smoking-Allowed (41%)	Implement restricted smoking areas (bar-only or a dedicated section) rather than a blanket no-smoking or blanket smoking-allowed policy
3	Higher price category has a positive association with top Overall Rating	Partially Accepted	High: 47%, Medium: 45%, Low: 33% — High and Medium are close; Low clearly underperforms	Don't assume price alone drives satisfaction; Low-price venues underperform, but High vs Medium is not a meaningful gap
4	Valet parking has a positive association with top Overall Rating	Accepted	Valet: 52% Rating-2 — clearly highest (None 42%, Yes 42%, Public 38%)	Expand valet parking at flagship / high-traffic locations

Section B: Consumer Cuisine Preferences

#	Hypothesis	Status	Finding	Recommendation
5	Mexican cuisine is disproportionately preferred among consumers	Accepted	Mexican: 97 of ~142 consumers — far ahead of next-highest (American: 11)	Prioritize Mexican cuisine, as it is the most in-demand category among consumers
6	Mexican cuisine is the best-rated cuisine	Rejected	Among rated cuisine categories, Japanese leads (57%), followed by Regional (54%), Breakfast (53%), and Contemporary (53%) — Mexican does not top the ratings	To drive the highest guest ratings, focus menu and quality investment on Japanese, Regional, Breakfast, and Contemporary cuisine offerings

Hypothesis Testing Summary — Findings & Recommendations

Section C: Top Rating Match — Food vs Service, by Restaurant Parameters				
#	Hypothesis	Status	Finding	Recommendation
7	Food wins over Service for the best Overall Rating at venues where drinks are not served	Accepted	None: 236/197 (~17% gap, food ahead); Full Bar: 31/28 (~10%); Wine & Beer: 109/109 (even)	For venues not serving drinks, emphasize food quality (taste, portion, presentation) as the primary satisfaction driver; where drinks are offered, balance investment between food and service
8	Food wins over Service for the best Overall Rating at venues where smoking is not allowed	Partially Accepted	No: 273/239 (~14% gap, food ahead); Smoking Section: 78/68 (~15%); Yes: 16/17 and Bar Only: 9/10 (service slightly ahead)	Combine with the restricted-smoking-area finding (#2) — No-Smoking and Smoking-Section venues should emphasize food, reinforcing the case for structured smoking zones over blanket policies
9	Food wins over Service for lower price categories	Accepted	Low: 91/66 (~38% gap, food strongly ahead); Medium: 196/180 (~9%); High: 89/88 (~1%, essentially tied)	For low/medium price venues, emphasize food heavily; for high price venues, invest equally in service quality — pair with the Valet Parking finding (#4) to strengthen the high-end guest experience
10	Service wins over Food where a parking facility is available	Rejected	Food leads in None, Public, and Yes parking categories; only Valet is exactly balanced (13/13)	Offer valet parking to create a balanced food-and-service experience that supports overall business stability and growth
11	Service wins over Food at open-area venues	Rejected	Food leads in both Closed (336/305, ~10% gap) and Open (40/29, ~38% gap) venues	Regardless of area type, continue prioritizing food quality as the stronger driver of guest satisfaction
12	Food/Service rating match rates differ by franchise status	Rejected	No: 327/289, Yes: 49/45 — proportionally very similar gap in both groups	Franchise status doesn't meaningfully change the food/service balance

Hypothesis Testing Summary — Findings & Recommendations

Section D: Top Rating Match — Food vs Service, by Consumer Parameters

#	Hypothesis	Status	Finding	Recommendation
13	Food/Service rating match rates differ by state	Accepted	San Luis Potosi: 279/248, Morelos: 69/64, Tamaulipas: 28/22 — largest proportional gap in Tamaulipas	San Luis Potosi dominates the sample; treat state-level differences as directional guidance for regional strategy
14	Younger people prefer Food over Service	Accepted	Young Adult: 308/270 (~14% gap, food ahead); Senior Citizen: 49/45 (~9%) — the gap narrows with age	Tailor venue focus to the visiting crowd's age group — venues drawing a younger crowd should prioritize food
15	Non-smokers prefer Food over Service	Accepted	No (non-smoker): 273/239 (~14% gap, food ahead); Yes (smoker): 16/17 (near-equal, service slightly ahead)	Target the non-smoking segment with a food-forward experience; smoking sections can lean more evenly on service
16	Food/Service rating match rates differ by drink level	Rejected	Abstemious: 139/119, Casual: 94/86, Social: 143/129 — all show a similar ~15% gap	Drink level doesn't meaningfully change the food/service balance
17	Singles emphasize Food over Service more than married guests	Accepted	Single: 327/287 (~14% gap, food ahead); Married: 35/34 (~3%, nearly tied)	Married/family guests likely already eat well at home and visit for the full experience — balance food and service equally for them; emphasize food for singles
18	High-budget guests give equal weight to Service as to Food	Accepted	High budget: 22/21 (~5% gap, nearly tied) — consistent with the High-price finding (#9)	For high-budget guests, invest equally in service and food quality; this cross-validates the pricing-tier recommendation in #9

Section E: Overall Driver Comparison

#	Hypothesis	Status	Finding	Recommendation
19	Food rating is a stronger driver of Overall Rating than Service rating	Accepted (marginal)	Top-rating match: 376 (53%) vs 334 (47%); Correlation: 0.71 vs 0.69	Treat food and service quality as near-equal priorities; don't deprioritize service based on the match-count gap alone
